Why is Solar Important?

Kansans deserve affordable
energy that doesn't pollute
our air or water.

When paired with energy
storage systems, solar energy
is one of the lowest-cost,
most reliable electricity forms
that will create local jobs –
without the negative impacts
on our air and water!

Why Kansas?

Kansas is considered a top
10 state for sunny days, yet
we're in the bottom 10 for
solar power production. ^(SEIA)

Unique topographical and
geographical attributes give
us the potential to generate
abundant affordable, clean
energy right here in Kansas!

Our Solutions For Residential Solar Accessibility

HOA Solar Freedom

Remove unreasonable HOA restrictions on rooftop solar

Kansans should have **the right to produce their own power**, but right now HOAs can block your ability to install a solar system. We're re-introducing legislation that gives rights back to homeowners who want to install solar.

Instant Solar Permitting

Encourage localities to adopt SolarApp+ program

We're working with the SolarApp+ Foundation to encourage local governments to adopt a platform that can **cut weeks off the process for permitting** residential rooftop solar.

Plug & Play Solar

Legalize and popularize Plug-in/ "Balcony" solar

Several states have already **modernized laws to allow households to offset power bills** with these easy and affordable plug-in systems. We're working on introducing legislation here in Kansas to do the same!

Our Solutions For Commercial Solar Accessibility

Local Business Investment

Help businesses claim 100% bonus depreciation for solar

New federal rules allow for businesses to **deduct up to 100% of a solar project's costs from their taxable income in the first year**. We're spreading the word about this great opportunity for businesses to reduce their long-term energy costs!

Community Solar

Ease restrictions with suitable state legislation

Community solar programs could allow **more people and businesses to participate in the benefits of affordable solar energy**. We're supporting legislation to support the development of community solar programs.

Utility-Scale Solar

Continue support for utility-scale solar & battery storage

Increasing utility-scale solar is an opportunity for Kansas to become more **energy independent and produce affordable, clean energy**. We support these installations by lending our voice and expertise at the local level.

Types of Solar

Rooftop Solar
Solar panels mounted on rooftops of individual residences.

Plug & Play Solar
Small, portable systems that plug in to a regular wall outlet to partially offset the energy needed from a utility provider.

Commercial Solar
Large solar systems installed on commercial properties to meet the energy needs of a business.

Community Solar
A solar facility shared by community members who "subscribe" for energy credit, separate from their primary utility.

Utility-Scale Solar
Large-scale solar installations that feed power directly onto the energy grid.
